Instead, the wooden-bodied was introduced, similar to the EDR170 but with an agathis body. Sources from the Ibanez catalogues: from the 1997 catalog. The most notable feature of the Ergodyne models is the body material, a synthetic material developed as a substitute for wood.

Portal For a list of EDR models, see The Ergodyne series is a line of solid-body electric guitar (and bass guitar) models produced by under the brand. The Ibanez EDR series had two pickups (1 while the EDA and EDC models had a piezo bridge and a single pickup (1). The EDR is the oldest of the models. Most models were made with a man-made material called Luthite, but in 2006 they offered a wooden version of the EDR bass. The was introduced a year later and was a more deluxe version with Ibanez pickups and a. All EDR models have a rounded body shape reminiscent of the the models or the Larc in the series run a model, the, was produced which eschewed luthite for wood but retained the Ergodyne shape. The, also introduced in 2005, was another model based on the original Ergodyne guitar. Bass models The Ergodyne series also featured a few 4 and 5 string bass guitar models which had three distinctive body shapes.
