FAQ

[Lesson 5 Homework Practice Direct Variation Answer Key](#)

Key Idea

Direct Variation

Words When two quantities x and y are proportional, the relationship can be represented by the direct variation equation $y = mx$, where m is the constant of proportionality.

Graph The graph of $y = mx$ is a line with a slope of m that passes through the origin.

Two-Person Lift

Two-Person Lift

$$\begin{aligned}\text{slope} &= \frac{\text{change in } y}{\text{change in } x} \\ &= \frac{8}{4} = 2\end{aligned}$$

The two-person lift travels 2 meters per second.

The distance y (in meters) that a two-person ski lift travels in x seconds is represented by the equation:

$$y = 2x$$
